CAREER OBJECTIVE

I am a hands-on developer with experience in full-stack development, computer vision, and system optimization. I build practical solutions across domains like education and real-time video analysis, with a focus on efficient and reliable code.

EDUCATION

SRM Institute of Science and Technology — **Kattankulathur, Chengalpattu**
B. Tech in Computer Science and Engineering – IT (CGPA: 7.92) — *Graduation Date: May 2026*

Sagar International School — **Perundurai**
12th Grade, CBSE (Score: 77%) — *June 2022*
10th Grade, CBSE (Score: 78.4%) — *May 2020*

EXPERIENCE

ARCTIC ENGINEERING CO. — Web Developer Intern — *June 2024 – July 2024*
Web Development, API Testing, UI/UX Optimization | HTML, CSS, JavaScript, Python, REST APIs, Postman

- Built and optimized responsive web applications using HTML, CSS, JavaScript, and Python, enhancing performance and cross-browser compatibility.
- Validated REST APIs and workflows using Postman, improving application reliability and reducing UI/UX issues

PROJECTS

Low-Light Traffic Detection System using YOLOv8
Python, OpenCV, YOLOv8 (Ultralytics), PyTorch, NumPy, Google Colab — *October 2025 – November 2025*

- Built a low-light traffic detection system using YOLOv8 and OpenCV, applying image enhancement techniques (CLAHE, gamma correction, denoising) to improve detection accuracy in night conditions.
- Processed video streams with optimized inference pipeline, detecting and tracking vehicles in real-time and generating annotated output videos.

CollegeFindr – AI-Powered College Recommendation Platform (view project **)**
HTML, CSS, JavaScript, Python, Flask, Llama, Open Router API — *January 2025 – April 2025*

- Built a full-stack college recommendation platform using Flask, HTML, CSS, and JavaScript, enabling end-to end query handling and dynamic recommendations.
- Integrated Llama (Open Router API) for conversational, personalized suggestions and optimized the system to handle high-volume simulated queries reliably.

Tomato Leaf Disease Prediction using Deep Learning
Python, TensorFlow Lite, CNN (Efficient Net), OpenCV, NumPy — *March 2026-April 2026*

- Developed a deep learning-based system using CNN (Efficient Net) to classify tomato leaf diseases into healthy, early blight, and late blight categories.
- Integrated Grad-CAM for visual interpretability and built a lightweight deployment pipeline using TensorFlow Lite for real-time, low-resource environments.

CERTIFICATIONS

- **AWS Academy Graduate – AWS Academy Machine Learning Foundations** — Amazon Web Services (AWS) | Feb 2024
- **Image Processing Onramp** — MathWorks | Feb 20240
- **Demystifying Networking** — NPTEL | Aug 2024
- **The Complete 2024 Web Development Bootcamp** — Udemy | Nov 2024
- **AWS Academy Graduate – AWS Academy Cloud Architecting** — Amazon Web Services (AWS) | Sep 2025

SKILLS & INTERESTS

Languages: Python, Java, JavaScript, SQL | **Web & Backend:** HTML, CSS, Flask, REST APIs | **ML & CV:** NumPy, Pandas, OpenCV, YOLOv8 | **Systems:** CUDA, OpenACC | **Tools:** Git, Postman, Linux

Interests: Artificial Intelligence & Machine Learning | Computer Vision Systems | GPU & Parallel Computing | Full-Stack Web Development | Cloud Computing | Software Performance Optimization | Applied Software Engineering
